Zinc

Zn

DANGER
Keep out of reach of children

HAZARD CLASSIFICATIONS:
Causes serious eye damage. Harmful to aquatic life with long lasting effects.

PERSONAL PROTECTION: Wear eye/face protection. Wash hands and face before meals and after work.
STORAGE: Store in original container, tightly closed and in a dry, cool area above 5ºC away from direct sunlight and foodstuffs.
DISPOSAL: Triple rinse empty container and add rinsate to the spray tank. If recycling, remove cap and deliver clean container to an Agrecovery depot. Alternatively crush and bury in an approved landfill. Dispose of product only by using according to the label, or at an approved disposal facility.
SAFETY DATA SHEET: Additional information is listed in the SDS available from the supplier, Sipcam NZ Ltd, and www.sipcam.co.nz

FIRST AID:
For advice call the National Poison Centre, telephone 0800 POISON (0800 764 766). If medical advice is needed, have product container or label at hand. If swallowed contact a Poison Centre or a doctor if you feel unwell. If on skin wash with plenty of soap and water. Get medical advice if skin irritation develops. If in eyes rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a Poison Centre or doctor. If inhaled remove person to fresh air and keep at rest in a position comfortable for breathing.

Approved under the HSNO Act 1996, HSR002571

AMINO BOSS ZINC
NET CONTENTS: 20 Litres

AGRECOVERY Rural Recycling Programme

Highly available plant active chelate formulation

Zinc 100 g/L

A unique formulation of zinc amino acid chelate solution containing the complete range of amino acids to assist in chelation and plant performance. Recommended for foliar applications where a 100% chelated product with excellent plant uptake and good compatibility is required.

DIRECTIONS FOR USE

- **AMINO BOSS ZINC** is a zinc nutrition deficiency correction for all crops. It can be used in a preventive program or at the onset of symptoms.
- Product should be used during ideal growing conditions to ensure effective uptake. Avoid extreme weather conditions such as heat and frost events.
- For most effective results apply in the early morning or late afternoon as this will assist in minimising risk of rapid drying on the leaf due to evaporation.
- Where local experience of successful use is not available, use a small-scale test application prior to wide spread use. If any issues are observed DO NOT continue with the application.
- It is recommended to add to the tank mix after all other products have been mixed well in the tank, including most of the water.
- DO NOT apply by foliar application to stone fruit after fruit set unless crop safety has been fully tested on your variety.
- DO NOT apply by foliar application to flowers of any crop.

The following is a general guideline. For detailed recommendations consult your agronomist or crop advisor.

CROPS	GROWTH STAGE	RATE	COMMENTS - ALL CROPS
Cereals (wheat, barley, oats, triticale)	From 3 - 5 leaf to 1st node GS31	1.5 - 3.0 L/ha	Apply by foliar spraying or through a calibrated fertigation system using the higher rate. Can be injected at planting or as a side dressing at 5.0 L/Ha in broadacre crops. Utilise foliar, petiole or sap analysis to guide application timings. Ensure good leaf coverage and canopy penetration. Use the high rate and repeat at 14 day intervals for moderate to severe deficiency.
Grain and Silage maize	From 4- 8 leaf		
Seed and Forage Legumes (clover, peas, Lucerne)	10 -14 days before flowering. For grazing/ forage crops 10 -14 days after cutting.		
Seed and Forage Brassicas (swede, turnip, kale, rape, and hybrids) **Seed, Fodder and Sugar Beet**	From 4 - 9 leaves. Repeat as needed.		
Vegetables (brassicas, cucurbits, fruiting vegetables, potatoes, carrots, onions)	From onset of active growth. Potato: From full emergence and during tuber bulking.	0.5 - 2.0 L/ha	
Tree and Nut Crops Kiwifruit and Berryfruit and Grapevines	Bud burst to pre flower and between harvest and leaf senescence according to individual crop best practice.	1.0 - 3.0 L/ha	

COMPATIBILITY

Compatible with most common fertilisers and crop protection products. It is recommended to perform a jar test before mixing. DO NOT use with amine based products. DO NOT apply **AMINO BOSS ZINC** with copper fungicides by foliar application on any crops as it will increase the activity of copper and may result in unacceptable levels of phytotoxicity.
