

EcoSpread[®]

SUPER SPREADER

Enhances the performance of fungicides, insecticides, herbicides, growth regulators and foliar fertilisers.

ECOSPREAD[®] is a super spreader surfactant that enhances spreading when used with herbicides, insecticides, fungicides, growth regulators and foliar fertilisers. As a super spreader, the sprayed droplets are distributed widely and rapidly resulting in an evenly wetted plant.

ECOSPREAD[®] improves active ingredient uptake by increasing the penetration through the waxy layer of leaves, even under difficult conditions e.g. hot and dry.

EcoSpread®

SUPER SPREADER

ACTIVE INGREDIENT: 100% Polyether Modified Trisiloxane

DIRECTIONS FOR USE:

Apply ECOSPREAD® at the rates listed below:

PRODUCT	CROP	ml/10 litres	
Insecticides and Fungicides	Row crops (including cereal crops), Fruit trees and Vines, Vegetables, Ornamentals	5 -10	Use the higher rate for hard to wet plant foliage
Growth Regulators	All	5 -10	
Foliar Fertilisers	All	5 -10	
Herbicides		5 -10	

Mixing:

Half fill spray tank with water and begin agitating. Add chemicals according to label instructions, whilst maintaining agitation. After all other chemicals and fertilisers have been thoroughly mixed, shake ECOSPREAD® container thoroughly and add required amount.

Compatibility: ECOSPREAD® is compatible with most fungicides, insecticides, herbicides, plant growth regulators and foliar nutrients, provided they are suited for low volume applications. ECOSPREAD® should not be used where the product label prohibits the use of surfactants.

Rainfall: ECOSPREAD® improves rainfastness. Rain one hour after application can be tolerated with no need for re-application.
