SUPER SEAWEED PLANT FOOD

Use Ocean Power® to improve crop, plant and soil health, it will boost plant vigour, defend against natural climatic occurrences, (drought and frost) and also helps defend against insect attack.

Ocean Power® is naturally made from an *Ascophyllum nodosum* seaweed concentrate with added natural bio stimulants that have been identified to boost overall plant health and vigour.

FEATURES: OceanPower® is an easy to use seaweed extract that can be added to a watering can and watered directly onto plants. OceanPower® can also be added to your sprayer when applying insecticides, fungicides or herbicides.

The ideal time to use OceanPower® is when plants are in bud burst and to counteract transplant stress. This assists with fruit crop and size as well as boosting natural defences against insect and disease attack.

SUPER SEAWEED PLANT FOOD

INGREDIENTS: A pure form of *Ascophyllum nodosum* marine plant extract with a balance of natural bio stimulants.

DIRECTIONS FOR USE: Measure out 20mls to 10 litres of water or 10mls to 5 litres of water. Fill your watering can or sprayer with the required amount of water then add Ocean Power seaweed and mix well before applying.

To enhance performance, use with EcoSpread®.

Product Information Sheet: A product information sheet including a Certificate of Analysis detailing macro and micro nutrients, carbohydrates and amino acids is available from Grosafe Chemicals Limited.

CROP	TIME OF APPLICATION
Pipfruit & Stonefruit	Through spring to harvest, two to three applications. Apply onto the plant until run off.
Citrus	From flowering to harvest, two to three applications. Apply on the plant until run off.
Grapes & Berryfruit	Bud burst to harvest at 30 day intervals.
Vegetables	Through spring to harvest, two to three applications. Apply onto the plant until run off.
Roses & Ornamentals	Apply to roses at early leaf development and after each deheading.
Lawn/Turf	Apply during spring, summer and autumn at 30 day intervals.
Seed soaking	Soak seeds to be planted for 5-8 hours in a dilution of 3 ml/litre of water. Soakage time is dependent on the thickness of the seed coat.
Root dipping	Can reduce mortality rates by dipping planter bags, plant containers or bare rooted plants for five minutes in a dilution of 5mls /10 litres of water, prior to planting.
Hydroponic growing	30mls per 10 litres of water.
Withholding period: One day
