

How to get great results organically with Grosafe in your garden!

Smarter seaweed solutions are now available to New Zealand growers. Robbie Yortt of Grosafe explains the importance of a special kind of seaweed and advanced patented extraction methods.

New Zealand's commercial growers were the first to see the benefits of seaweed products developed by Grosafe. The Mt Maunganui based company works across a wide range of horticultural crops as more and more growers embrace a regenerative farming approach. Grosafe's most recent innovation is OceanFert®, a slow release fertiliser made out of the seaweed species, *Ascophyllum nodosum* (the Rolls Royce of seaweeds). This is the only seaweed fertiliser on the market, plus it is BioGro certified. This product is a perfect substitute for blood and bone and manure based fertilisers. It is clean, weed free and easy to use. OceanFert® is natural with no synthetic compounds.

Did you know that seaweeds produce anti-stress compounds to help them survive in the harsh ocean environment? These and other valuable natural compounds present in seaweed act to 'chelate' micronutrients, making them more readily available to plants.

When seaweed is applied to crops they develop stronger resistance to pests and disease while improving their ability to withstand climatic stress such as prolonged drought and frost. The rewards come at harvest time with the higher yields that result from improved plant vigour and general health.

Once OceanFert® is applied to your garden it will be available to your plants for 4 to 6 months, at the same time rejuvenating the soil in your garden. OceanFert® is ideal for vegetable crops, ornamentals, seedlings, planting holes, lawn, and pot plants. OceanFert® will support plant growth, increase crop yield and quality and support plants against abiotic and biotic stress. It is high in organic matter, phytohormones and amino acids. In addition there is a balancing of macro and micro nutrients.

Organic EnSpray 99® Insect Oil RTU: A ready-to-use spray oil for the control of mites, aphids, thrips, scale, mealybugs, whitefly, powdery mildew & botrytis.

EnSpray 99® inhibits eggs, nymphs and adult insects and mites breathing resulting in suffocation. This mode of action is through direct contact and that is why Grosafe's Organic EnSpray 99® RTU spraying bottle is the perfect solution, with its ability to smother the insects and fungicide pathogens with the fine mist of oil and water. The special spraying bottle will also carry on delivering a fine spraying mist even while it is upside down so you can access the under side of foliage and leaves enabling coverage of 100% of the plant.

Spraying oils have been found to affect the feeding and egg-laying behaviour of insect pests. EnSpray 99® is a pure and safe crop oil available to home gardeners to use to control mites, aphids, thrips, scale and mealy bugs as well as powdery mildew in grapes. By applying EnSpray 99® before the real pressure occurs you will be able to keep your plants healthy and pest free.

Available in leading garden centers throughout New Zealand
