

# INTRODUCING GROSAFE® INSECTICIDES

CERTIFIED BY BIOGRO NEW ZEALAND

BioNeem® is a broad spectrum insecticide derived from the neem tree, for the control of aphids, thrips, whitefly, leaf-mining flies, mealy bugs, mites and scale.

BioNeem® contains 10,000 ppm (1%) of pure azadirachtin and 30% clarified hydrophobic extract of neem oil to produce a high efficacy on insect pests on fruits, vegetables, ornamentals, flowers and lawns, tree crops and vines.

BioNeem® is a naturally based anti-feeding insecticide. It leads to feeding inhibition and to moulting and a reduction in fecundity and breeding ability. BioNeem® controls a wide range of plant pests without harming beneficial insects.

BioNeem® is a unique new generation formulation. It is formulated by using azadirachtin at a rate of 10g/litre and neem oil at a rate of 300g/litre. Azadirachtin is the true insecticide and is extracted from the neem seed while neem oil is added back to the formulation as a compatible "carrier" that provides additional insecticidal properties. The clarified hydrophobic extract of neem oil supports the active ingredient, azadirachtin, by suffocating insect and mite pests.

## Benefits of using BioNeem®

- BioNeem® effectively controls the economically important pests in a wide range of crops.
- Usually safe to beneficial insects and predatory mites when applied at label rates, thus offering long lasting pest control.
- Helps to increase productivity by controlling pests and improving crop health.
- Low cost per litre.

APHIDS

LEAF MINERS

WHITEFLY

SCALE

MITES

THRIPS

MEALYBUGS

EnSpray 99® spraying oil is used for the control of mites, aphids, thrips, scale, mealy bugs and powdery mildew.

Spraying oils have been found to affect the feeding and egg-laying behaviour of insect pests and EnSpray 99® is a pure and safe crop oil available for use by home gardeners. By applying EnSpray 99® before the real pressure occurs you will be able to keep your plants healthy and pest free.

EnSpray 99® spraying oil inhibits eggs, nymphs and adult insects from breathing, resulting in suffocation. This mode of action is through direct contact.

EnSpray 99® has 99% purity, meaning it can stay on the plants surface and keep working without damaging the plant or restricting growth.

Available in leading garden centers throughout New Zealand
