

# LAWN CARE

## SELECTIVE HERBICIDES

It is important to spray your lawn out with Hydrocotyle Killer, Prickle Weedkiller and Lawn Guard, as a good followup from your previous spring lawn care programme and to set your lawn up for the following spring. Recommended to use BioPower® Seaweed Flake in conjunction to act as a bio-stimulant to help flush desirable grasses.

The best time for optimum lawn care is spring and autumn.

## GROSAFE® LAWN CARE

### Hydrocotyle Killer

Controls hydrocotyle, Onehunga weed, creeping oxalis and other broadleaf weeds (including daisies and clover) in grass lawns. Apply in spring and autumn when weeds and turf are growing vigorously. 1. Mix 50ml in 5 litres of water. 2. Spray onto 50 square metres of lawn. 3. Apply evenly over the measured area. Pack Size: 200ml

### Prickle Weedkiller

Onehunga weed is very common in New Zealand lawns, producing a mass of small prickles over the summer. The optimum time to apply is in October, after the majority of plants have germinated and before they set seed. A second spray in autumn will reduce the problem for next season. Mix 10ml per litre of water and apply to 5 square metres using a spray unit or water can. Pack Size: 200ml

### Lawn Guard

To control broadleaf weeds, Onehunga weed and clovers in lawns established one year or more. Apply to actively growing weeds in spring or autumn. Use 80ml per 100 square metres in 5 to 10 litres of water. Keep children, pets, wildlife and birds off all treated lawns until the spray is dry. Pack Size: 200ml

### BioPower Seaweed Flake

A pure seaweed bio stimulant extracted from fresh *Ascophyllum nodosum*, for use on ornamentals, fruit, vegetables and lawns to enhance plant growth, improve yields and crop quality. Pack Sizes: 100g & 200g

**All lawn care products can be mixed together and sprayed on as one spray**

To enhance performance, use with **EcoSpread®**

**Mixing:** Grosafe® recommends the following mixing order and procedure.

1. Read labels for all Directions for Use and recommended rates.
2. Fill a bucket with the required amount of water.
3. Add the **Hydrocotyle Killer, Prickle Weedkiller and Lawn Guard** and stir.
4. Add the **BioPower® Seaweed Flake** next then stir.
5. Top with the required volume of water if necessary.

**NB.** Gardeners can mix the products directly in their knapsack sprayer in the same sequence as recommended above if this is more convenient.

Hydrocotyle Killer, Prickle Weedkiller and Lawn Guard are very damaging to all woody species and care must be taken to avoid spray drift. Please read product labels for full precautions and directions of use.
