

# Prepare to Love your Lawn with Grosafe® garden

## From preparation to sowing tips

### Autumn

1. Spray out existing area with Knockdown® Weedkiller and let it die down.
2. Use weed free top soil and mix with OceanFert® Granular Seaweed Fertiliser.
3. Use a leveling bar to get a smooth surface and try to contour away from the house, smooth out dips and hollows.
4. Sow the seed in two directions - from east to west and north to south. Then rake lightly and water with a fine mist. Continue watering if needed every two days.
5. It is best not to mow until the grass is established to about 5cm. Be very careful not to mow the young grass too short.

### How to look after your lawn.

Once your lawn is established (3 to 4 months), Grosafe has a full range of selective weed killers that can help control the weeds in your new lawn.

**Prickle Weed Killer** - is a selective weedkiller for the control of Onehunga weed (The Prickle Weed). Apply in Spring before the prickle weed flowers and dries off.

**Hydrocotyle Killer** - a selective weedkiller for control of hydrocotyle, creeping oxalis and other broadleaf weeds in grass lawns. Apply in spring and autumn when weeds and turf are growing vigorously. Do not apply if rain is expected within 6 hours.

**Lawn Guard** - to control broadleaf weeds, such as convolvulus, docks, sorrel, cape ivy, thistles, buttercups and clovers in lawns established 3-4 months or more. Lawn Guard also controls woody weeds.

EcoSpread® can also be applied with the lawn care products for improved rain fastness (30 minutes) and efficacy.
