

POT PLANT FOOD - VEGE GARDEN FOOD

@ceanFert®

Granular Seaweed Fertiliser

**Ideal for indoor and outdoor plants.
A slow release, seaweed fertiliser that will rejuvenate
the soil, stimulate microbial activity and assist
plants to fight disease and insect attack.**

SLOW RELEASE FERTILISER

**1
kg**

OceanFert® is derived from fresh *Ascophyllum nodosum*, sustainably harvested from the North Atlantic Ocean. It is a natural storehouse of major and minor nutrients, carbohydrates, amino acids and naturally occurring growth supporters.

OceanFert® is manufactured by converting the fresh, raw seaweed into a fertiliser granule using a patented fermentation process and mechanical granulation.

OceanFert® is a slow release fertiliser. Soil micro-organisms breakdown and decompose the solid granules over a long period of time, slowly releasing nutrients and compounds as the growing plants require them.

OceanFert® is a naturally derived soil conditioner. It will increase soil organic matter, improve soil physical structure and enhance fungal and bacterial activity in the soil.

Plant and soil benefits from consistent use:

- Improves growth, yield and quality of crops.
- Improves availability and composition of major and minor nutrients.
- Promotes greater root growth and development.
- Increases vigour and resilience to biotic and abiotic stress.
- Enhances soil microbial activity.
- Improves soil pH, texture, aeration and drainage.
- OceanFert® is meant to be used as part of your standard fertiliser program and is certified for use on organic crops. Final recommendations should be based on soil tests and soil specific conditions.

Storage: Store under dry conditions and away from direct sunlight. Store in the original packaging, and do not mix with other fertiliser products while storing the product as this could affect shelf stability.

Compatibility: OceanFert® is compatible with all conventional and organic fertilisers.

Crop safety: OceanFert® is safe to apply to all crops, at all development stages. It can be mixed with seedlings directly, without burning roots.

DIRECTIONS FOR USE:

Use higher application rates for low organic matter and low pH soils.

TIMING	APPLICATION METHOD	RATES	COMMENTS
Fruit trees & vines			
At planting	Plant hole	0.5 - 1 kg/tree	Add to plant hole.
Established	Top / side dressing	1 - 2 kg/tree	Apply once in spring and again in autumn. Target tree drip line.
Vegetables			
Pre-plant	Broadcast	50 - 100 g/m ²	Add to garden mix and reapply during flowering or for leafy vegetables (e.g. lettuces) 30 days after planting,
At planting	Plant furrow side dressing	25 - 50 g/m ²	
Established	Top / side dressing	25 - 50 g/m ²	
Ornamentals & potted plants			
Pre-plant	Beds - broadcast	50 - 100 g/m ²	Apply at planting.
At planting	Plant hole	200 - 500 g/plant hole	Reapply every spring and autumn.
Flowering & established	Beds - broadcast	50 - 100 g/m ²	
Notes: Pot size: 1L - 15cm diameter pot, 2L - 18cm, 3L - 21cm, 5L - 24cm			
Pot Plants Indoor and Outdoor			
At planting	Add to potting mix	20 g/litre of soil	Reapply every 3 months.
Maintenance	Top dressing	20 g/litre of soil	

WARRANTY: This formulation is warranted to contain the specified active ingredient within accepted analytical tolerance when packed. The user bears the risk for damage resulting from factors beyond the manufacturer's control. The manufacturer declines all liability for damage resulting from improper storage or use of the product.
