

# Spring into Action with Grosafe Garden - the gardeners' choice

**GroVentive® Garden** is an insecticide that will provide systemic protection, from chewing and sucking insects (mites, psyllids, scale, mealy bugs, aphids, thrips and whitefly) on your flowers, pot plants and ornamentals. This product is best applied before pesky insects get established so your beautiful garden is protected. Apply up to 3 - 4 times during the growing season.

**Enspray 99®** Spraying Oil is friendly to users and lethal to chewing and sucking insects. This go to product is BioGro (organic) and registered for use on your ornamentals and food crops. It works by smothering the insects so they suffocate, it will also interrupt the breeding cycle. Where the product has been applied female insects will not want to lay their eggs. It can be reapplied every 10 - 14 days when insects are actively feeding and breeding.

**BioNeem®** is another BioGro (organic) registered insecticide that is safe to use on your ornamentals and food crops. It works very well on aphids, mites, thrips, whitefly, leaf-mining flies, mealy bugs and scale. This product is very economical to use as you only need one 1 ml per litre when applying to your plants. It also works as a breeding inhibitor and insects do not like to feed or lay their eggs where BioNeem® has been applied.

4547

EnSpray 99® and  
BioNeem® are  
BioGro certified  
(organic)

If you buy all three of these products and use them as per label recommendations your garden should be protected throughout the growing season.
