

OceanFert®

Granular Seaweed Fertiliser

NOT ALL SEAWEEDS ARE EQUAL

In terms of nutrient density and plant yield, the most effective seaweed species is *Ascophyllum nodosum* sustainably harvested from the North Atlantic. It is a natural storehouse of macro and micro nutrients, carbohydrates, amino acids and naturally occurring growth supporters.

- Only slow-release seaweed fertiliser on the market
- BioGro Certified
- Great alternative to sheep pellets or blood and bone
- High in organic matter, improves soil structure
- One application feeds plants for 4-6 months
- Natural stimulant
- Perfect for planting and adding nutrients to your veggie garden or pots
- Can be applied directly to soil without fear of burning the roots of seedlings
- Vegan

Also available in commercial sized 25kg and 1000 kg bags.
