

FreeFlo® Copper for Food Crops and Roses

Grosafe Garden never sits still when it comes to gardening and just like our parent Grosafe Group, we are continually developing and evaluating our products to ensure we offer the best possible solutions to your needs. For the last two years we have been running independent trials to see how effective our copper is compared to liquid coppers and here are the results.

Black Spot Leaf - % Average incidence across trials conducted and assessed in 2023

Available in 100g and 200g

Untreated Blackspot average at 35%
Liquid Copper Blackspot average at 4%
FreeFlo® Copper Blackspot average at 1.5%

Peak Research 2022 - 2023 Rose

The trials were conducted on roses to assess control of black spot. These results confirm how effective copper hydroxide is, with its smaller particle size, giving a superior coverage on plant surfaces enhancing the elimination of undesirable fungal spores and bacterial diseases.

Grosafe Garden is the only supplier of this copper hydroxide formulation, so make sure you are protecting your garden with FreeFlo® Copper.

FreeFlo® Copper is safe, easy to mix and use and ideal for the home garden.

Ask for Grosafe FreeFlo® Copper at your local garden centre.

FreeFlo® Copper 300g/kg Copper Hydroxide
