

BIOPOWER[®] N BOOST

LIQUID MARINE PLANT EXTRACT 9.9:1.2:4.0

*An organic Nitrogen Boosted Seaweed Bio Stimulant
extracted from fresh Ascophyllum nodosum with
Fish Amino Acid.*

For use in pasture, turf, arable crops, kiwifruit, viticulture, avocados and many other horticultural and vegetable crops as a bio stimulant to support plant growth, increase yields, improve fruit quality and to aid plants in overcoming stress caused by drought, frost, insect attack or fungal infection. BioPower[®] N Boost is manufactured using biological fermentation under low temperature and negative pressure.

GSRNB736/F02

BIOPOWER® N BOOST

NOT CLASSIFIED AS A HAZARDOUS SUBSTANCE.

PERSONAL PROTECTION: Wear eye and face protection, protective clothing and gloves when applying this product. Do not eat, drink or smoke while using this product. Wash hands, face and exposed skin thoroughly after handling. Take off contaminated clothing and wash before reuse.

STORAGE AND HANDLING: This product contains natural preservatives but should be stored away from intense sunlight and heat. Avoid spillage as product is very slippery and may create a hazard.

SPILLS AND DISPOSAL: When dealing with spills wear personal protective clothing and equipment as described in the PERSONAL PROTECTION section.

PRODUCT DISPOSAL: Dispose of this product only by using in accordance with this label, or at a suitable landfill.

CONTAINER DISPOSAL: Triple rinse empty container and recycle container via Agrecovery

(www.agrecovery.co.nz) or at an approved landfill.

SAFETY DATA SHEET: A safety data sheet is available from Grosafe Chemicals Ltd.

FIRST AID: If exposed or concerned, get medical advice. For advice call a doctor or the National Poisons Centre (0800 764 766) If SWALLOWED, do NOT induce vomiting. Rinse mouth. IF IN EYES, flush with plenty of water for at least 15 minutes. Remove contact lenses if present and easy to do and continue rinsing. IF ON SKIN, remove contaminated clothing and wash skin with soap and water. IN CASE OF INHALATION, remove to fresh air, and keep at rest in a position comfortable for breathing.

EMERGENCY RESPONSE 0800 CHEMCALL: (0800 243 622)

BioPower® N Boost for General Use

BioPower® N Boost is high organic nitrogen boosted seaweed derived from fresh *Ascophyllum nodosum* marine plants harvested from clean, cool, sustainable, coastal environments plus Fish Amino Acid. It is a natural storehouse of major and minor nutrients, carbohydrates, amino acids and naturally occurring plant bio stimulants, which support crop health, nutrition and quality.

Benefits of Use: Consistent use of **BioPower® N Boost** supplements a well balanced nutritional programme.

Use **BioPower® N Boost** to increase desirable yield, improve overall plant nutritional health, improve root growth and development, improve plant vigour and maximise crop potential during periods of stress. To achieve the desired results the levels of major and minor nutrients must be adequate to support the increased production potential from the use of **BioPower® N Boost**.

Compatibility: **BioPower® N Boost** is compatible with most herbicides, fungicides, insecticides and fertilisers. Some pH adjustment may be required with acidic mixtures. Add surfactants after the product has completely

dissolved in the tank solution. When mixing with calcium products thoroughly mix **BioPower® N Boost** with the water in the tank prior to adding the calcium product. If compatibility of chemicals is unknown a 'jar' test is recommended.

Product Information Sheet: A product information sheet including a *Certificate of Analysis* detailing macro and micro nutrients, carbohydrates and amino acids is available from Grosafe Chemicals Limited.

DIRECTIONS FOR USE

BioPower® N Boost is suitable for use in liquid foliar, soil applied, irrigation and fertigation applications.

Mixing Instructions: When possible, add **BioPower® N Boost** to the spray or fertiliser tank mix first. Fill half the mixing tank with clean water, begin agitation and gradually add recommended quantity of **BioPower® N Boost** to the spray and the remainder of water.

Foliar Applications: Use enough water for good spray coverage. Foliar sprays should be applied as a fine mist with low fluid velocity until the foliage is wet. In general terms application rates should not exceed 2000 litres per hectare in dense tree crop situations and be scaled back in crops where the foliage is sparser. Do not foliar apply during times of moisture or heat stress. For best results apply during the cool part of the day (morning or evening), when temperatures are below 25°C. Do not spray just before or after rainfall or sprinkler irrigation. Use a non-ionic surfactant for maximum coverage and leaf adhesion.

Soil Applications: Soil applied treatments can be made by soil directed sprays of **BioPower® N Boost** on its own, or tank mixed with other fertilisers or pesticides, by sidedress treatments, applications through irrigation systems or other methods which effectively apply **BioPower® N Boost** to the soil. When making irrigation treatments, add **BioPower® N Boost** to the supply tank. Continuous agitation of the supply tank is recommended. **BioPower® N Boost** can be applied through drip, micro sprinkler overhead sprinkler furrow, flood and other types of irrigation at recommended rates. For micro sprinkler soil jet or drip irrigation, apply after the system has reached operating pressure. Inject for at least one hour followed by a two hour flushing cycle to clear the system of all product. Avoid heavy irrigation following product application to prevent leaching of material from the plant root zone.

APPLICATION RATES

Fertigation (Irrigation application): used alone or as a synergising agent to mineral fertilisers.

Dosage 3.0 – 6.0 L/ha

Seed Soaking: Soak seeds to be planted for 5–8 hours in a dilution of **3 ml/litre of water (dilution rate of 1:333)**. Soakage time is dependent on the thickness of the seed coat.

Root Dipping: Can reduce mortality rates by dipping planter bags, plant containers or bare rooted plants for five minutes. **Dosage 5 ml/10 litres of water prior to planting (dilution rate of 1:666)**. After planting bare rooted plants, a root drenching at the same dilution rate is recommended.

Foliar Application: Apply at 150 – 300 mls per 100 litres of water. Apply a minimum of 3 Litres per hectare. Do not exceed 2000 litres of water per hectare.

VEGETABLES	Foliar Application Timing — Application Rate 3.0 – 6.0 L/ha			
	1st Application	2nd Application	3rd Application	Optional
Beans and Peas	Six-leaf stage	Commencement of flowering	First pods	Pod fill
Broccoli, Cabbage and Cauliflower	Six-leaf stage	3 weeks after first application	Head initiation	Head development
Carrots, Leeks and Onions	2 weeks after emergence	Root enlargement	Every 2 weeks until harvest	
Capsicums, Eggplants, Melons Squash and Pumpkins	Six-leaf stage	Commencement of flowering	First fruit set	4 weeks after 3rd application
Cucurbits and Cucumbers	Six-leaf stage	Immediately prior to flowering	Every 2 weeks until harvest	
Sweetcorn	Six-leaf stage	55–75cm height	Just prior to tasselling	
Potatoes	Six-leaf stage	0.5cm tubers	Commencement of flowering	Tuber growth
Tomatoes (Fresh Market)	Six-leaf stage	Commencement of flowering	Apply at picking	2 weeks after 3rd application

FRUIT	Foliar Application Timing — Application Rate 3.0 – 6.0 L/ha				
	1st Application	2nd Application	3rd Application	4th Application	Optional
Grapes	20–30cm cane	45–60cm cane	Full bloom	Berry set	3 weeks after 4th application
Apples, Pears and Kiwifruit	Green tip	Pre-bloom pink bud	Full bloom	Early fruit formation	Every 3 weeks
Avocados and Citrus	Early bloom	Petal fall	Summer spray	Autumn spray	Every 3 weeks
Berry fruit	After transplant	Prior to bloom	While picking	3 weeks later	Every 3 weeks
Stone fruit	Bud burst	Petal fall	4 weeks after 2nd application	3 weeks after 3rd application	Every 3 weeks
Plums and Cherries	Pink white bud	Full bloom	Early fruit formation	3 weeks after 3rd application	Every 3 weeks

CEREALS	Foliar Application Timing — Application Rate 1.5 – 3.0 L/ha			
	1st Application	2nd Application	3rd Application	Optional
Wheat and Oats (Winter)	First node detectable	Flag leaf		After any environmental stress
Barley (Winter)	Early post emergence (2 leaf stage)	Flag leaf		After any environmental stress
Wheat and Oats (Spring)	1–3 Tillers (GS 12–13)	First node	Flag leaf and after any environmental stress	
Barley (Spring)	1–3 Tillers (GS 12–13)	First node	Flag leaf and after any environmental stress	
Maize	2–6 leaf stage	At 50–75cm growth	Just prior to tasselling	

BROAD ACRE	Broadcast Foliar Application, Overhead Sprinkler and Flood Irrigation	
	Application: Apply 3.0 – 6.0 L/ha as a broadcast spray in 200–300 litres of water per hectare BioPower® N Boost can be added to irrigation systems as a metered dose	
Lucerne	Apply after each cut	
Pasture	1. Recommended to apply 'little and often' once a month throughout the year. 2. Apply as a Bio stimulant to increase the number and activity of beneficial soil micro-organisms. This will improve grass growth and help reduce soil-borne disease symptoms in pasture.	
Turf	1. Apply to greens, tees and fairways. 2. Regular applications (monthly) are beneficial. The Bio stimulant activity of BioPower® N Boost will support beneficial soil micro-organisms, improve grass growth and help reduce soil borne disease symptoms in turf. 3. Tilling in turf will also be increased, without excessive top growth.
