AMINO BOSS®

Fodder

PLANT ACTIVE CHELATE FORMULATION

N Zn Mn Cu B Mg Mo Ca

Highly available plant active formulation

Nitrogen 100 g/L, Zinc 2 g/L, Manganese 8 g/L, Copper 3 g/L, Boron 10 g/L, Magnesium 7 g/L, Molybdenum 0.7 g/L, Calcium 11 g/L

DANGER

Keep out of reach of children

HAZARD CLASSIFICATIONS:

Maybe harmful if swallowed. Causes serious eye damage. Suspected of damaging fertility. May cause damage to organs through prolonged or repeated exposure

PERSONAL PROTECTION: DO NOT handle until all safety precautions have been read and understood. Wear protective gloves, protective clothing, eye/face protection. Avoid skin and eye contact and inhalation of spray mist. Wash hands and face before meals and after work.

STORAGE: Store in original container, tightly closed and in a dry, locked, cool area above 5ºC away from direct sunlight and foodstuffs.

DISPOSAL: Triple rinse empty container and add rinsate to the spray tank. If recycling, discard cap and deliver clean container to an Agrecovery depot. Alternatively crush and bury in an approved landfill. Dispose of product only by using according to the label, or at an approved disposal facility.

SAFETY DATA SHEET: Additional information is listed in the SDS available from the supplier, Sipcam NZ Ltd, and www.sipcam.co.nz

FIRST AID:

If swallowed contact the National Poisons Centre 0800 POISON (0800 764 766) or a doctor if you feel unwell. If on skin wash with plenty of soap and water. Get medical advice if skin irritation develops. If in eyes rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical advice/attention if eye irritation develops. If inhaled remove person to fresh air and keep at rest in a position comfortable for breathing. Call a POISONS CENTRE or doctor for advice if person feels unwell

Approved under the HSNO Act 1996, HSR002571

AMINO BOSS FODDER
NET CONTENTS: 20 Litres

Batch No:

Date of Manufacture:

AGRECOVERY Rural Recycling Programme

AMINO BOSS FODDER is a nutrition supplement designed for all annual fodder crops to be used in a preventive program to assist with many essential cellular functions.

- A unique chelated micronutrient solution containing the complete range of amino acids to assist plant performance.
- Recommended for foliar applications where a 100% chelated product with excellent plant uptake and good compatibility is required.

DIRECTIONS FOR USE

- Product should be used during ideal growing conditions to ensure effective uptake. Avoid extreme weather conditions such as heat and frost events.
- For most effective results apply in the early morning or late afternoon as this will assist in minimising risk of rapid drying on the leaf due to evaporation.
- Where local experience of successful use is not available, use a small scale test application prior to wide spread use. If any issues are observed DO NOT continue with the application.
- Apply by foliar spraying or through a calibrated fertigation system.
- It is recommended to add to the tank mix after all other products have been mixed well in the tank, including most of the water.
- Ensure good leaf coverage and canopy penetration.

The following is a general guideline. For detailed recommendations consult your agronomist or crop advisor.

CROPS	GROWTH STAGE	RATE	COMMENTS
Forage Brassicas (swede, turnip, kale, rape and hybrids)	From 4 - 9 leaves.	2.0 - 3.0 L/ha	Repeat at 14 day intervals for extended benefits. Can be injected at planting or as a side dressing at 2 to 5 L/Ha. Utilise foliar, petiole or sap analysis to guide application timings. Where severe deficiency of any particular nutrient is known, tank mix with solo nutrient products such as **AMINO BOSS BORON**.
Fodder and Sugar Beet (all varieties and hybrids)	4 - 6 leaf and at 8 -12 leaf for bulb growth.	2.0 - 5.0 L/ha	

COMPATIBILITY

Compatible with most common fungicides and insecticides. It is recommended to perform a jar test before mixing.

DO NOT apply **AMINO BOSS FODDER** with copper fungicides by foliar application on any crops as it will increase the activity of copper and may result in unacceptable levels of phytotoxicity.

Mixing with certain herbicides may increase the negative impact on the crop often seen with them.
